

CLOUD SERVICES

Private, Public, Hybrid or Multi, What Cloud are You?

The Cloud universe is now a myriad of offerings that can cause confusion and uncertainty as you undertake your journey. Interactive's Multi-Cloud solutions provide a clear path to customising your IT systems with the best of Public and Private Cloud technology. We match the right clouds to your business requirements.

MULTI-CLOUD SERVICES

Our full stack of multi-cloud offerings (listed below) provide a broad range of options that can be activated depending on your business demands, current technical capabilities, security requirements and the future needs of your company.

“Outsourcing our IT gave us the headspace to focus more on our core business application. We’re adding more value to our customers by providing a quality service and real time information where and when it’s needed.”

Christopher Burke, MD
International Racehorse Transport

BEST OF BREED

Interactive Multi-Cloud allows you to pick and choose from a growing range of services to create a customised portfolio that fits the needs of your organisation. An Interactive Cloud solution allows you to select the best cloud for your needs at a specific point in time.

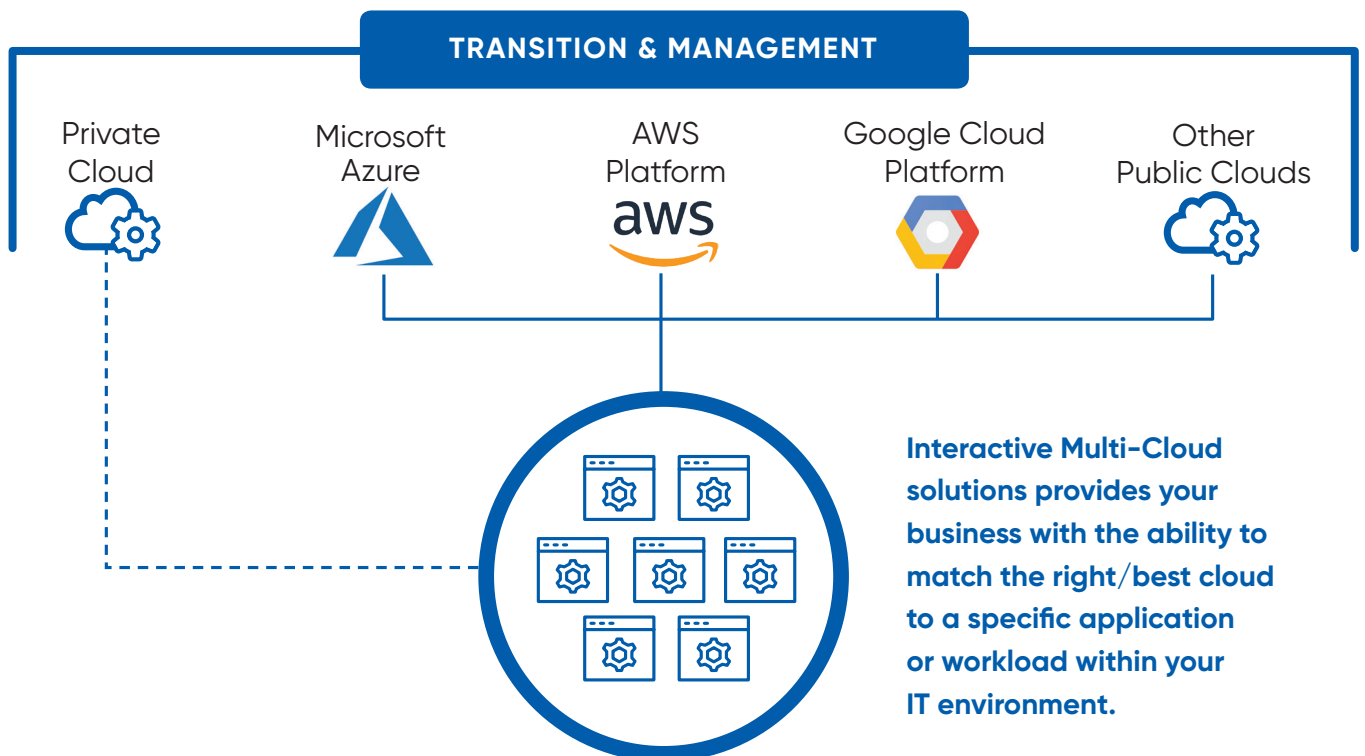

RISK MITIGATION

Multi-cloud allows you to build greater resiliency at a price lower than traditional methods. By spreading your workloads across multiple cloud providers, the chance of simultaneous downtime reduces exponentially.

CLOUD COMPATIBILITY

Cloud platforms, regardless of form factor or delivery method, are not always compatible with each other or with legacy systems. It is often presumed that clouds will talk nicely together and data will flow freely from one to the other – this is often not the case. The ability to pick and choose between offerings in a multi-cloud environment is the key to making the right connection between cloud and other IT environments.
