# MANAGED DETECTION AND RESPONSE

# MANAGED DETECTION AND RESPONSE

## INTERACTIVE PROTECTS CUSTOMER'S IT SYSTEMS BY SECURING THEIR ASSETS AGAINST RANSOMWARE ATTACKS.

In the past, organisations protected themselves with firewalls around their enterprise systems as workers and devices largely operated inside their network. As the nature of work has changed and access to devices and IT systems has evolved, managing and securing enterprise data against cyber threats has moved to the endpoint.

Protecting your endpoints is critical against ransomware attacks that can disrupt operations, impact revenue, threaten your reputation and expose customer's data. Endpoints such as notebooks and mobile devices are at the front line as organisations move to remote working. Managed Detection and Response delivers faster investigation, response and remediation to contain threats faster and keep organisations online.

## BENEFITS OF A MANAGED DETECTION AND RESPONSE SOLUTION:

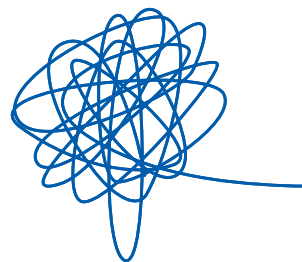

- Stay ahead of the attackers with advanced detection capabilities
- Extend protection from ransomware and malware to all your endpoints
- View the status of all your endpoints on a single pane of glass
- Strongest ransomware protection – 100% efficacy in 3rd-party testing
- Eliminates the need to monitor and maintain on-premises infrastructure
- Faster detection of dangerous network activity without all of the false alerts
- Prevent known and new threats as they evolve
- 24x7 security operations centre for triage and response

RANSOMWARE ATTACKS IN 2019

MCAFEE/TREND MICRO 2020

vmware® Carbon Black

We have a finite budget, so we need to balance spend and capability. Any cost savings we make we can reinvest in other parts of the business.

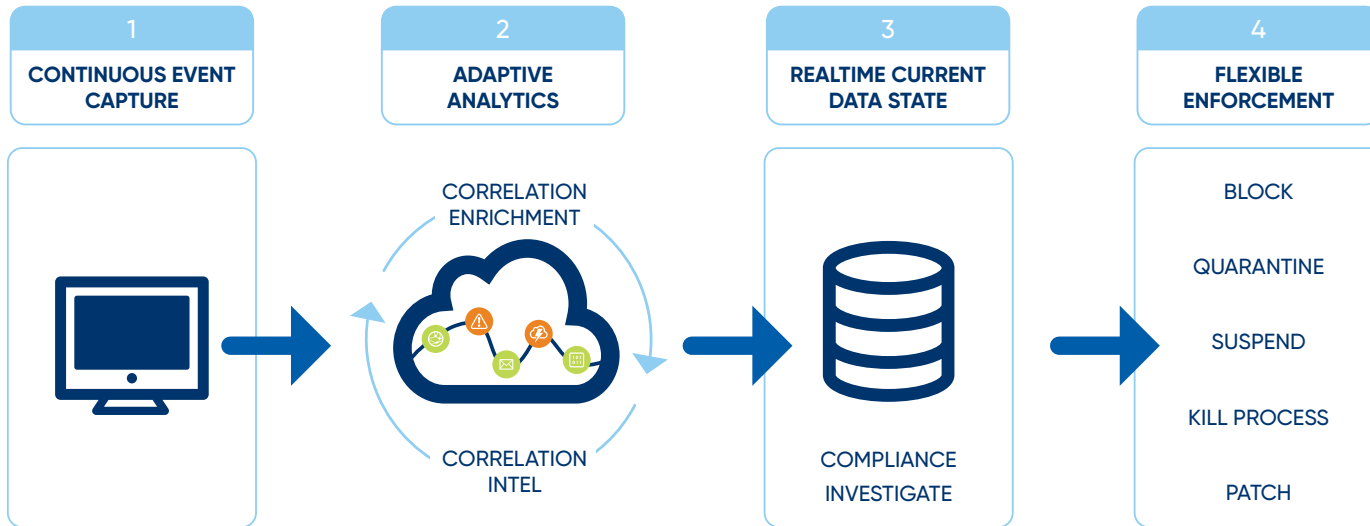

**Tuan Tran, Head of IT, Brightside**

## MANAGED DETECTION AND RESPONSE

Works by installing an agent onto your endpoint assets, which is used to continually monitor your endpoint security events.

Our cloud platform analyses the data to either investigate and identify a past security incident or use the data to look for similar threats.

OPEN & EXTENSIBLE PLATFORM ARCHITECTURE

Let Interactive Managed Detection and Response continuously protect your remote workforce, endpoint devices and IT systems against ransomware.

Secure your business today
