VULNERABILITY MANAGEMENT AS A SERVICE

VULNERABILITY MANAGEMENT AS A SERVICE

INTERACTIVE HELPS ORGANISATIONS IDENTIFY AND PRIORITISE VULNERABILITIES IN THEIR IT ENVIRONMENT.

Cyber criminals use vulnerabilities in organisations IT networks to access and exploit high value assets. These include customer information, intellectual property and financial records, which if accessed or stolen can lead to business disruption, reputational damage and significant commercial impacts.

What ever their source, vulnerabilities don't go away with out action. Knowing what is vulnerable and at risk helps organisations understand and priorities for remediation. Detecting, removing and managing vulnerabilities through regular scans, up-to-date notifications and continuous monitoring is critical to safeguard everywhere accurately and efficiently.

ONLY 44%

OF SECURITY LEADERS APPLY BUSINESS RISK WHEN PRIORITISING VULNS.

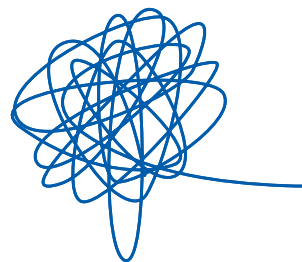

VULNERABILITY MANAGEMENT AS A SERVICE ALLOWS YOU TO:

- Create a detailed inventory of customers assets which is monitored regularly
- Regularly scan all your assets and receive notifications and recommendations of risks detected
- Engage with an expert analyst on-shore that knows your business and responds accordingly
- Know what's active in your IT environment by visually mapping your network
- Prioritise your risk remediation by assigning a business impact to each asset
- Identify which operating system, ports, services and certificates are on each device on your network
- Reduce the effort to manage your assets through dynamic tagging, easy to access asset history

We have a finite budget, so we need to balance spend and capability. Any cost savings we make we can reinvest in other parts of the business.

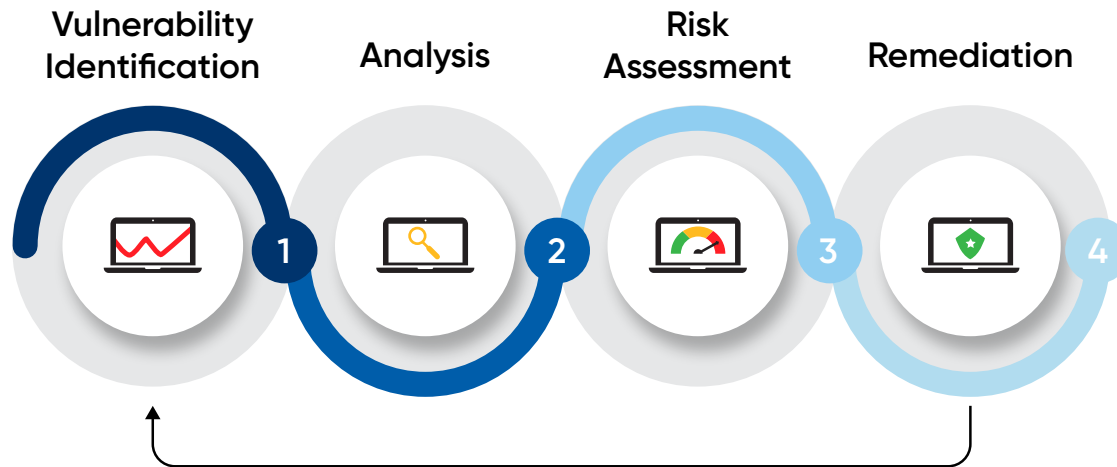

Tuan Tran, Head of IT, Brightside

VULNERABILITY MANAGEMENT AS A SERVICE

Interactive's Vulnerability Management as a Service will scan, analyse and report on your IT environment against known vulnerabilities on a monthly basis. Our analysts will perform a risk assessment on the vulnerabilities based on your business context.

Let Interactive Vulnerability Management as a Service identify, priorities and protect your critical assets.
